

Flat Plate Routing Jig

18247

Our low-profile short and long plate sprung door handles are engineered with a spring mechanism that recesses into your door.

To install any of our sprung door handles with backplates, you'll need to cut a square pocket into the door for the mechanism.

Our routing jig will provide an exact guide for our [template profiler router bit](#), so you can achieve the correct hole spacing.

- Compatible with short and long backplates
- Designed to sit centrally on the existing latch
