

Single + Double Plasterboard Back Box

10796

These back boxes are made from fully recycled and recyclable post-consumer plastic. They're for plasterboard cavity walls, with tabs and a lip that grip the plasterboard securely.

Unlike other plastic back boxes, we've designed them to work perfectly with our switches and sockets that sit flush to the wall. They're deep enough to hold all the electrics inside, and the design means the switch or socket plates sit in the correct position every time.

- Quick and easy to fit
- Fire retardant
- Dimensions (external): height 74mm x width 220mm x depth 50mm
