

Antique Brass Restoration Kit

17474

Antique brass is a 'living' finish, which means that it'll react to its environment. The oil from your hands, the moisture in the room, even the air around it will cause it to darken over time.

You can use our restoration kit to restart the ageing process and return the finish to its original look.

How to use

- If possible, remove the product from its fitted location.
- Lightly rub the brass polish onto the metal surface of the product in small circles until the paste turns dark.
- Gently wipe the paste off and buff until clean.
- Once clean, use the abrasive pad to mattify the surface.
- When you're satisfied with the finish, use a clean part of the cloth to apply the wax to the brass. Buff until the surface is completely and evenly covered.
- This kit must only be used with Antique Brass products.
