Smart In-Line Dimmer Modu

mart In-Line Dimmer Module 59183

When installed behind our retractive toggle and rocker switches, our smart in-line dimmer module will let you control your lights using your smartphone, tablet, or voice.

As well as remote dimming and switching, you can set "scenes" to adjust the warmth and brightness of one or more of your lights. You can also set automations to turn lights on or off for a fixed duration depending on the time of day.

It works with both iOS and Android and doesn't require third-party apps or smart bulbs – all you need is a smart home hub of your choice.

And if you ever want to control your light directly at the switch, that's fine too. Physical and remote dimming and switching will work in harmony.

- Use with our retractive toggle and rocker switches
- Accessible and energy-efficient smart home system that uses Matter over Thread technology
- Matter is a universal new connection standard supported by Apple, Amazon, Google, and more
- Compatible with iOS and Android
- Seamless integration with one or multiple smart hubs simultaneously
- Easily create multiple scenes and automations

Input rating: **15A 125V~**

Protocol: **Matter over Thread**

Dimming control: **Retractive modules**
